

## Our Series

We have chairs for long or short work sessions, for one or more users and custom solutions such as ESD protection, worktop chairs and 24-hour chairs. Our four product series will help you find the right chair for the right situation.

### 1 / Individual

Individual is the series with our most exclusive and ergonomically advanced chairs. Because the chairs are adjusted to your natural back profile, they are mainly aimed at you who have a personal workplace and whose day consists of long periods of sitting. The chairs are certified for sitting throughout the whole day and can also be adjusted to relieve existing back problems.

---

Developed for sitting 8 hours or more

---

Suitable for personal workspaces

---

Individually adjusted to the user's needs

---

### 2 / Focus

In today's activity-based workplaces, there is a great need to find room for deep concentration. The Focus series is designed to give you and your colleagues maximum seating comfort and mobility after only a few settings. The back is self-forming and the seat has a softly rounded waterfall front which improves blood circulation and reduces the risk of pressure on nerves and blood vessels in the fold of the knee.

---

Developed for sitting 8 hours or more

---

Suitable for shared spaces with different users

---

Perfect ergonomics after only a few settings

---

### 3 / Active

Developed to fit up to 95% of all back profiles. The Active series is perfect for rooms and workspaces with one or more users where you want to sit comfortably regardless of sitting position and move quickly and easily when needed. It works just as well in an active workshop as it does for medium-concentrated work by the desk.

---

Developed for sitting 4 - 8 hours

---

Suitable for meeting rooms or shared spaces

---

Quickly adjusted and self-forming comfort

---

### 4 / Adaptive

For specialized tasks and workplaces where an ordinary work chair is not enough. Your work is demanding and you should make demands on your work equipment. Within the Adaptive range you find ESD chairs, worktop chairs, 24H chairs and other custom adaptations. Our chairs can also be customized for special ergonomic needs.

---

Customized chair solutions

---

Built from existing models

---

Approved for various work environments

---

## Accessories

Everyone has different needs and for you to get the most out of your Malmstolen chair, we recommend that you equip it for the intended task. The result will be one of the market's best ergonomic seating solutions that will support you and your health for many years to come.

### Adjustable neckrest

The adjustable neckrest is practical when you lean backwards. It relieves your neck muscles. The height of the support is adjustable and it has a dual joint design that makes it possible to move it forwards towards your head.

### Pascal by DUX® seat

Our Pascal by DUX®-seat is one of the secrets behind our comfortable chairs. The larger the area your weight is distributed over, the better you will sit. Our Pascal by DUX®-seat has been developed together with Swedish DUX and shapes itself to the user. It provides superior weight distribution and comfort compared to conventional seats.

### Coccyx seat

An injured tailbone can cause a lot of pain and discomfort. The central rear part of the foam of the Coccyx seat is removed and replaced with a thin fabric. This reduces the pressure from the seat on the tailbone and reduces the pressure on the spinal discs - provided the back is relieved by the backrest.

### Tilt limiter

All our chairs can be tilted forwards. However, not everyone appreciates this feature, so we have developed a tilt limiter for Malmstolen 4000 and R4 that prevents the knee-tilt mechanism from tilting further than horizontal position.

### Armrest / Corona R3

Armrests with a rounder design that slide in depth which makes it easy to get close to your desk. 8cm height adjustment.

### Armrest / CoronaPlus

Armrests with a rounder design that slide in depth which makes it easy to get close to your desk. 8cm height adjustment.

### Armrest / ErgoFlex

Armrests that slide in depth and rotate 25° inwardly with the rotation point below the elbow. 11cm height adjustment.

### Armrest / ESD

Oblong armrest with a rounded design. The top of the armrest is covered in ESD fabric. 8cm height adjustment.

### Castors and bases

Select castors to suit the floor at your workplace. Soft castors for hard floors or hard castors for soft floors to ensure the chair does not roll too easily or too sluggishly depending on the floor. The base is available in three versions – nylon, polished or powder-coated black.
